Attention: Stakeholders

With the cooler temperatures that have settled over the region, motorists are reminded to be aware of possible ice and slippery road conditions during frosty mornings and evenings. Shaded areas, bridge decks, and corners are common areas where these conditions can occur on roads that may appear clear and dry. If vehicle windows are frosty, the surface of the road may be as well. Mainroad North Island Contracting crews are out on the roads patrolling 24/7, as well as applying brine and de-icing salt; however, motorists are reminded to drive to and for the conditions. Please exercise caution as weather conditions can change quickly, particularly around daybreak and sunset.

There is also the potential for variable snow conditions in the North Vancouver Island region on Saturday. Higher elevations such as Mount Washington, Gold River to Tahsis area and Tsitika Summit may see snowfall. Motorists are advised to check DriveBC.com for the latest road condition reports and

to drive for the conditions. Winter weather can change quickly, depending on your location, and so should driving habits. Mainroad North Island Contracting will patrol the service area throughout the weather event and respond accordingly.

Our 24 hour hotline is always available for reports and feedback: 1-877-215-7122. All calls are logged and observations are passed on to Mainroad Operations.
