Project Name	2022 Groundwater and Surface Water Monitoring and Reporting Services, Drinking Water Wellhead Protection		
Subject	<b>Fall 2022 Monitoring Event</b> <b>Village of Tahsis</b> <b>Tahsis, British Columbia</b>		

## 1. Introduction

Environmental monitoring was completed at the Village of Tahsis (VoT) by GHD staff on November 15 and December 7, 2022 (Monitoring Event). Groundwater samples were collected from six monitoring locations as part of the Wellhead Protection Plan (WPP) to assess potential landfill derived alteration to the aquifer, which currently supplies drinking water to the VoT. Two surface water samples were collected from two monitoring locations as part of the WPP to characterize the potential for seasonal variation in water quality. The Site plan and monitoring locations are illustrated on Figure 1.

This memorandum (memo) has been prepared as part of the scope of work described in the GHD's letter entitled 2022 Groundwater and Surface Water Monitoring and Reporting Services dated April 19, 2022 (Proposal).

### 1.1 Scope and Limitations

*This technical memorandum has been prepared by GHD for Village of Tahsis. It is not prepared as, and is not represented to be, a deliverable suitable for reliance by any person for any purpose. It is not intended for circulation or incorporation into other documents. The matters discussed in this memorandum are limited to those specifically detailed in the memorandum and are subject to any limitations or assumptions specially set out.*

## 2. Environmental Monitoring Program Description

The environmental monitoring program includes:

- Semi-annual sample collection at four groundwater wells (MW1S, MW1D, MW2S, MW2D) installed within the capture zone of the VoT's drinking water Production Well. These wells are located 1,500 to 1,650 metres (m) downgradient of a historical landfill area containing waste originating from the operation of a sawmill in the village and upgradient of the Production Well.

This Technical Memorandum is provided as an interim output under our agreement with Village of Tahsis. It is provided to foster discussion in relation to technical matters associated with the project and should not be relied upon in any way.

- Semi-annual sample collection at the Production Well installed near the intersection of McKelvie Road and Jewitt Street, which is located 1,750 m downgradient of the historical landfill.
- Annual sample collection at Test Well #2 installed at the intersection of Boston Street and Jewitt Drive, downgradient of the Production Well.
- Semi-annual sample collection at surface water monitoring location in McKelvie Creek (SW01-21)
- Annual sample collection at surface water monitoring location in the Tahsis River (SW02 21).

### **3. Monitoring Event Summary**

The following tasks were completed during the Monitoring Event:

- Water level monitoring, field parameter measurement, sample collection, and analytical testing of groundwater at MW1D, MW1S, MW2D, MW2S, Production Well, and Test Well #2.
- Field parameter measurement, sample collection, and analytical testing of surface water at SW01-21 and SW02-21.
- Due to field and laboratory error, E. Coli and total coliform analysis was not completed for the groundwater and surface water samples collected November 15, 2022. Re-sampling for e. Coli and total coliform analysis was completed on December 7, 2022.
- Analytical testing of a field blank as part of the quality assurance/quality control (QA/QC) program.
- Field sample key (FSK) preparation and environmental database updates.
- Verification of the analytical data by a qualified chemist as part of the QA/QC program.

### **4. Analytical Services and Data Validation**

Analytical services were provided by Bureau Veritas (BV) of Burnaby, BC, with results provided directly to GHD. The FSK and laboratory reports generated for the Monitoring Events are included in Attachment 1.

A qualified chemist completed a data verification to assess laboratory and field QA/QC measures. The QA/QC memo presented in Attachment 2 reports that the data exhibited acceptable levels of accuracy with the qualifications noted.

### **5. Water Quality**

#### **5.1 Groundwater Quality Results**

Groundwater analytical results have been assessed to the BC Contaminated Site Regulation, Schedule 3.2 Generic Numerical Water Standards (CSR) for drinking water (DW) and freshwater aquatic life (FAW). The CSR DW and FAW standards are appropriate for evaluating groundwater quality based on the following rationale:

- Protocol 21 for Contaminated Sites: Water Use Determination (ENV, October 31, 2017) states that both current and future drinking water use must be considered when determining whether CSR DW standards apply. Currently the VoT obtains drinking water from the Production Well; therefore, the drinking water exposure pathway is applicable and DW standards apply.

- Protocol 21 also states that CSR FAW standards apply to sites located within 500 m of an aquatic receiving environment (i.e., a surface water body containing aquatic life) unless it can be demonstrated that groundwater does not flow to that receiving environment. The CSR FAW standards are applicable due to the proximity of the Tahsis River west of select monitoring wells (i.e., MW1 and MW2 are located approximately 250 m from the high-water mark of the Tahsis River).

The groundwater analytical results assessed to the applicable CSR FAW and DW standards are presented in Table 1 and Table 2.

The groundwater concentrations of samples collected from MW1D, MW1S, MW2D, MW2S, the Production Well and Test Well #2 were less than the applicable CSR standards. These results indicate that there are no discernible landfill contaminants present in groundwater at these locations and the VoT drinking water is protective of human and aquatic health.

The groundwater concentrations of samples collected at Test Well #2 were less than the applicable CSR standards, with the exception of:

- Salinity (BC CSR FAW)

Due to the location of Test Well #2 being downgradient of the Production Well, the source of salinity is not landfill derived. In addition, Test Well #2 is outside of the Production Well capture zone indicating groundwater from the vicinity of this well will not impact the VoT's drinking water quality.

## 5.2 Surface Water Quality Results

Surface water analytical results have been assessed to the BC Water Quality Guidelines (WQGs) for DW and FAW and are presented in Table 3 and Table 4.

WQGs include both short-term maximum (STM) and long-term average (LTA) guidelines and may apply to dissolved or total parameter concentrations. The LTA guidelines are generally more stringent than the STM guidelines. WQGs are also often dependent on background conditions, hardness, chloride, calcium pH, and/or temperature. Surface water quality results have been assessed to the most stringent guideline available for each parameter.

Surface water concentrations of the sample collected from SW01-21 and SW02-21 were less than the applicable BC WQGs during the Monitoring Event. The potential for seasonal variability in water quality cannot be assessed at this time, a more comprehensive data set is required.

## 6. Recommendations

Continue the long-term monitoring program, as described in the WPP.

If you have any questions or require further clarification, please do not hesitate to contact GHD.

**Remarks:**

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested. This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

## GENERAL COMMENTS

Version #9: Report reissued to update the general comments based on modifications made to final report parameters reported as per client request on 2023/01/19.

Version #7, 8: Report reissued to amend client sample ID on BHE579 from WG-11218464-151122-CXW-06 to WG-11218464-151122-CXW-07 and BHE580 from WG-11218464-151122-CXW-07 to WG-11218464-151122-CXW-06 as per the original Chain of Custody. All analytical has been removed from samples BHE579 and BHE580 as per client request on 2023/01/10.

Version #6: Report reissued with updated notes 20221223

Version #5: Report reissued with missing NO<sub>2</sub>/NO<sub>3</sub> data on sample CXW-06 20221222

Version #4: Report reissued to include Dissolved Hardness as per client request received 20221221

Version #3: Report reissued to exclude results for Total coliform and E. coli as per client request received 20221215

Sample BHE577 [WG-11218464-151122-CXW-04] : OC Pesticides, OP Pesticides, PA Herbicides and Triazine Herbicides Analyses: Sample received at the analyzing laboratory (BV Mississauga Environmental) at a temperature above 10 C.

Sample BHE578 [WG-11218464-151122-CXW-05] : Sample was analyzed past method specified hold time for Turbidity. Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

OC Pesticides, OP Pesticides, PA Herbicides and Triazine Herbicides Analyses: Sample received at the analyzing laboratory (BV Mississauga Environmental) at a temperature above 10 C.

Sample BHE579 [WG-11218464-151122-CXW-07] : Sample was analyzed past method specified hold time for Nitrate + Nitrite (N). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Nitrite (N) by CFA. Sample was analyzed past method specified hold time for Mercury (Dissolved) by CV. Sample was analyzed past method specified hold time for Mercury (Total) by CV.

Sample BHE580 [WG-11218464-151122-CXW-06] : Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

### POLYCHLORINATED BIPHENYLS BY GC-ECD (WATER) Comments

Sample BHE574 [WG-11218464-151122-CXW-01] Polychlorinated Biphenyls in Water: Detection limit raised based on sample volume used for analysis.

Sample BHE575 [WG-11218464-151122-CXW-02] Polychlorinated Biphenyls in Water: Detection limit raised based on sample volume used for analysis.

Sample BHE576 [WG-11218464-151122-CXW-03] Polychlorinated Biphenyls in Water: Detection limit raised based on sample volume used for analysis.

Sample BHE577 [WG-11218464-151122-CXW-04] Polychlorinated Biphenyls in Water: Detection limit raised based on sample volume used for analysis.

Sample BHE578 [WG-11218464-151122-CXW-05] Polychlorinated Biphenyls in Water: Detection limit raised based on sample volume used for analysis.

**Results relate only to the items tested.**

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

The following results are qualified due to field duplicate variability:

Lab Report #	Sample Date (mm/dd/yyyy)	Sample ID	Analyte	Result	Qualifier	Units
C243791	06/21/2022	WG-11218464-210622-NT-03	Copper	0.70	J	µg/L
C243791	06/21/2022	WG-11218464-210622-NT-04	Copper	6.82	J	µg/L

Conclusion:

Based on the assessment detailed in the foregoing, the data summarized are acceptable with the specific qualifications noted above.

Notes:

- UJ - The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- J - The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- RL - Reporting Limit
- N/A - Not Applicable
- QA/QC - Quality Assurance/Quality Control
